IMPORTANT: Read This Before Proceeding With Dosing Go to the Prep & Injection Guide for proper reconstitution, syringe sizing, and injection protocols. Mistakes here can compromise your research. the Prep & Injection Guide AOD-9604 is a fragment of the human growth hormone developed for the treatment of obesity. It is designed to mimic the fat-burning properties of hGH without its muscle-building effects or the common side effects. This is achieved through Tyrosine (TYR), a portion of the amino acid sequence responsible for fat reduction and tissue repair. It mimics the effects of hGH on lipid metabolism without promoting growth or triggering pro-diabetic effects. Where GLP-1 agonists suppress appetite and influence insulin secretion, AOD-9604 inhibits lipoprotein lipase activity in fat tissue, stimulating lipolysis in adipocytes. It specifically targets areas of the body with high fat deposits, preventing the conversion of carbohydrates into triglycerides and fatty acids and blocking the process of lipogenesis. AOD-9604 can be particularly useful when stacked with GLP-1s to combat plateaus and target stubborn fat that diet and exercise alone may not eliminate. **BENEFITS** Increases metabolism Stimulates lipolysis Inhibits lipogenesis (formation of fat cells) Promotes bone and cartilage repair Improves bone strength Does not impact blood sugar levels Enhances collagen production and skin elasticity Possesses anti-inflammatory properties (beneficial for arthritis) Enhances joint flexibility and mobility Prevents medication-related muscle-wasting **POSSIBLE SIDE EFFECTS** Injection site reactions (redness, swelling, itching) Headache Fatigue Dizziness Cough Chest tightness or constriction Heart palpitations Cold-like symptoms **INTERACTIONS** Beta-adrenergic and fat-metabolism agents (e.g. clenbuterol, ephedrine, synephrine, stimulants): may produce palpitations and jitteriness **CONTRAINDICATIONS** Do not use AOD-9604 if you are pregnant or breastfeeding Do not use AOD-9604 if you are pregnant or breastfeeding Do not take with an active malignancy Because it is metabolized via proteolytic degradation and renal clearance, do not take AOD-9604 if you have severe liver or kidney disease Discontinue use if you determine you are hypersensitive or allergic Do not use AOD-9604 if you are pregnant or breastfeeding. **RECONSTITUTION, DOSING, & OTHER CONSIDERATIONS** Dose 1-2 times per day, daily First dose should be in the morning while fasted, and second should be while fasted (at least 1.5 hours following and preceding a meal) If at all possible, remain fasted 3-4 hours following injection Subcutaneous Administration We advise purchasing Acetic Acid solution from one of the links included below in order to combat gelling if it occurs. AOD-9604 has a tendency to be a fairly unstable peptide (high-maintenance in peptide form, if you will) **WHERE CAN I BUY ACETIC ACID?** Bireiao, 30mL, \$11.99 <https://a.co/d/0iJSh6dH> Quality Research Chemicals, 10mL, \$11.95 <https://a.co/d/07DdB6Ob> Zoniuu, 10mL, \$9.99 <https://a.co/d/03jnopya> **STANDARD PROTOCOL (GENERAL BENEFITS/ NON -FAT BURNING)** 20 day cycle, followed by 10 day washout

period; repeat for as long as necessary Reconstitution Mix with 2.5mL (250 units) of BAC water Dosing Take 15 units (300mcg) once per day FAT BURNING/WEIGHT LOSS PROTOCOL 90 day cycle, followed by 30 day washout period Reconstitution Mix with 2.5mL (250 units) of BAC water Dosing Take 13 units (250mcg) twice per day: once immediately after waking and the second at least 1.5 hours after dinner Stacking Suggestions AOD-9604 stacks well with several peptides, especially for regenerative or fat-loss goals. Common combinations include: GLP-1s BPC-157 TB-500 Ipamorelin Sermorelin CJC No DAC
