

Atx-304-Oral

PEPTIDES

ATX-304 (aka OS-01 or O-304) is an orally active, small-molecule pan-AMPK (AMP-activated protein kinase, a central regulator of cellular metabolism) network activator used for weight loss, metabolic reprogramming, and to repair acute kidney injury (AKI). This metabolic reprogramm

ATX-304 (aka OS-01 or O-304) is an orally active, small-molecule pan-AMPK (AMP-activated protein kinase, a central regulator of cellular metabolism) network activator used for weight loss, metabolic reprogramming, and to repair acute kidney injury (AKI). This metabolic reprogramming is accomplished via AMPK activation and by increasing mitochondrial activity. **BENEFITS** Significant improvements in lipid metabolism Reduction of blood cholesterol Increases resting metabolic rate by an average of 8% Reduces oxidative stress Increases insulin sensitivity Reduces insulin resistance Improves cardiac function Protects against age-related kidney fibrosis and acute kidney injury Reduced lipid accumulation in the liver Suppresses liver steatosis progression Ameliorates liver fibrosis Increased fatty acid oxidation Alters the distribution of fat among liver lobes Prevents liver cancer due to its impact on nonalcoholic fatty liver disease and metabolic dysfunction-associated fatty liver disease Increases cellular respiration via mitochondrial uncoupling Reduction of body fat that is not dependent on decreased food intake; rather, it works by increasing energy expenditure **POSSIBLE SIDE EFFECTS** Mild nausea Upset stomach Bloating Headache Fatigue Soft stools Transient acne **CONTRAINDICATIONS** Do not take if you are pregnant or breastfeeding Do not take if you determine that you are hypersensitive or allergic to ATX-304 **DOSING** Coming Soon
